Diana Simpson-Hernandez

Founder, Aletheai · AI governance and behavioural decision intelligence · Product strategy and design

London · hybrid | dianasimpsonhernandez@gmail.com | +44 (0)7973 933 859 | linkedin.com/in/dianasimpson | dianasimpsonhernandez.com

Open to: fellowships, residencies and founding roles in AI governance, assurance and safety · London, hybrid

Right to work: British citizen, UK right to work · English and Spanish · FRSA · AFHEA · Certified Scrum Master

PROFILE

Founder of a patent-pending behavioural decision-intelligence company, and a product strategist and designer with fifteen years turning emerging technology into decisions people will act on and can defend. In two years I have taken Aletheai from a question (how do you make a machine decision someone can trust?) to a built engine, six patent applications, a feasibility study with the STFC Hartree Centre and a route to market, without an engineering team. The through-line is governance as product: a system that only acts where the evidence supports it, says so when it doesn't, and leaves a record someone outside can check. I now want to work on the governance of AI systems that act on people: what they may do, what they must record, and how that can be assured.

ORIGINAL WORK AND INTELLECTUAL PROPERTY

Patents: six patent applications filed 2025–2026 (UK and international, self-drafted); two summarised below, the others unpublished

- **Behavioural decision intelligence —** International (PCT) application, priority September 2025, filed August 2026. A decision engine that reads behavioural signals from the systems a business already runs, ranks who or what deserves attention by the evidence rather than a score over everything, attaches a plain-English reason and next action to every item, and refuses to rank where the evidence is insufficient, with the refusal and its reason recorded. Ranking rests on a fixed, versioned library of behavioural archetypes that changes only at signed releases.
- **Governing agent actions —** UK application filed September 2026. Action gating for AI agents: every act an agent takes passes through a gate the agent cannot reach, is registered before it happens, and must be justified by evidence the agent did not write; refusals are recorded; oversight does not depend on reading the agent's reasoning. The gate uses no model, so it is deterministic and replayable. Governance of machine conduct, not machine thought.
- **Missingness and refusal (STFC Hartree Centre feasibility study, 2026) —** Designed the data strategy for testing the engine on real human-behaviour datasets, including a method for working out why data is missing before trusting a model on it. The honest-refusal principle grew out of this work.
- **Published methods —** decision diagnostics (LEVER), making an organisation's documents answerable (RECALL), product partnerships (STAKE), venture diagnostics (FLYWHEEL), non-engineers shipping with AI coding agents (Vibecoding), and Design Poiesis (working name), a method for designers working with AI. frameworks.dianasimpsonhernandez.com

EXPERIENCE

Aletheai (Monomindai Ltd) · London — Dec 2024 – present

Founder & CEO · product, architecture, IP and commercial direction

Behavioural decision intelligence. Patent pending. First pilot in UK estate agency: which enquiries deserve a negotiator's time today, why, and what to say, and an honest answer when the evidence isn't there.

- Set the product strategy and value proposition from discovery with UK and US agents; specified the engine and directed the build with AI coding agents under review gates: 12+ releases in 12 months with no engineering team.
- Drafted and self-filed the patent applications and wrote the disclosure rules around them; ran the STFC Hartree Centre feasibility study; secured RTC North backing and a Start Up Loan; launching through the Alto (Zoopla Group) marketplace, first cohort recruiting; three-time AI Forge pitch finalist.
- Owned pricing, licensing, partnerships, funding applications, and data-protection and security packs; designed Wayfind, a consumer research instrument on follow-through, with privacy guarantees enforced in the schema.

Slimming World · Derbyshire, UK — 2019 – 2024

Principal UX Strategist · Design Department Manager

- One of the UK's largest behaviour-change services (250,000+ members). Managed a team of 12 designers; company-wide design system; wrote the UX Strategy & Discovery training programme (external training spend down 45%, onboarding time down 70%); led the digital North Star strategy; built and showed an early behavioural-intelligence proof of concept for the member journey.

DiSH Creative Ltd · London (clients UK and US) — Apr 2024 – present

Founder · AI strategy, discovery and applied-AI delivery on contract

- **Language Kids World, Houston (2026) —** Mapped a 60-person language-education operation, then designed and sequenced AI automations so each relieved the next: curriculum development from weeks to hours (92% less time); found and closed a security gap unprompted.
- **Commercial and non-profit clients (2024) —** Applied-AI product strategy and automation frameworks combining rules, model assistance and human oversight; board workshops for AI use-case prioritisation; impact measurement for NGOs.

IED Madrid · London College of Communication (UAL) · Madrid · London 2025 – present

Lecturer, AI-native product building · mentor, venture coach and judge

- Vibecoding workshops for MA students (non-engineers shipping working products with LLMs and coding agents in a term), also run as in-house company training; venture evaluation lectures and mentoring at LCC; judge, LCC Accelerate 2026 (UAL · NatWest Accelerator).

Earlier — Senior Lecturer in Product Design, Nottingham Trent University (2017–19). Co-founder & Chief Product Officer, Shake Your Power CIC (2014–17): SPARK, the first energy-generating musical instrument; US patent granted, two London Design Award Golds, STEM pilots in the UK, US and India. Founder, Monogram Publishers (2014–): author of The Art of Getting Stuff Done (2022).

WHAT I BRING TO AI GOVERNANCE

Governance: what a system may infer, say and do about people · evidence-ranked priority, honest refusal and the decision record · agent action gating · DPIA-ready evidence trails · model evaluation (calibration, lift, drift) · EU AI Act and UK-principles readiness

Strategy and product: which decisions and workflows AI should touch and which to leave alone · build / buy / leave · pilot design · discovery with operators and regulators' needs in view

Delivery and enablement: specification-first builds with AI coding agents under review gates · data readiness · in-house training for product, design and leadership teams

Tools: Claude, OpenAI and Mistral APIs · LLM and RAG product design · AI coding agents · Python · Streamlit · synthetic data · Git/GitHub · Figma

EDUCATION & AFFILIATIONS

Education: MA Design Products, Royal College of Art · BA Product Design, Central Saint Martins (UAL) · MIT xPRO, Designing & Building AI Products and Services (2024) · IDEO U, Service Design · Oxford Saïd, FinTech · ILM Level 3 Leadership

Affiliations: FRSA · AFHEA · Education Ambassador, CREATE · invited talks at the European Commission, British Library, V&A, RCA, CSM · English and Spanish (fluent), Italian (working)
